

DYLAN T. BOYZA

West Chester, PA | (412) 865-5597 | dboyza19@gmail.com | [linkedin.com/in/dboyza](https://www.linkedin.com/in/dboyza)

SUMMARY

AWS Certified Solutions Architect and DevSecOps/platform engineer with TS/SCI w/Poly, focused on secure AWS automation, Python validation workflows, and reliable cloud delivery. Hands-on with Terraform, GitLab CI/CD, Docker/EKS, observability, IAM/VPC security controls, and AI-assisted engineering workflows for reviewable changes in large codebases.

PROFESSIONAL EXPERIENCE

Lockheed Martin King of Prussia, PA	2023 - Present
DevSecOps Engineer: AWS Cloud Architecture and Automation	TS/SCI w/Poly
- Developed Python orchestration tooling to run daily validation across 150+ Ansible roles, coordinating Terraform apply/destroy, Windows/RHEL domain and DNS setup/teardown, parallel multi-server execution, and failure reports to Ansible SMEs when prior-day changes introduced regressions. - Deployed a HashiCorp Vault cluster with Terraform and Ansible in a hybrid cloud environment, centralizing Kubernetes secrets management and standardizing secure application secret access. - Provisioned AWS infrastructure with Terraform across 4 environments in Git-controlled GitLab CI/CD pipelines, making changes easier to review, trace, validate, and promote. - Designed secure AWS platform architectures across EC2, Lambda, S3, VPC networking, route tables, security groups, IAM least privilege, Secrets Manager, RDS/Aurora, DynamoDB, SQS/SNS, CloudWatch, CloudTrail, and EventBridge. - Developed Ansible roles with modular, reusable subtasks, including API calls to Broadcom Layer7 API Gateway for version-controlled configuration, security hardening, and validation across Linux/Windows systems. - Deployed Docker/containerized applications across multi-server and EKS/Kubernetes environments, connecting platform automation with MySQL-backed service workflows. - Troubleshoot network and platform issues by analyzing firewall logs, cloud events, access patterns, and ELK centralized logs; refined rule sets and access controls to resolve reliability and security defects.	
Westinghouse Electric Company Cranberry Township, PA	Summer 2022
Software Engineer Intern	
- Led development of a web application for entering, storing, and managing predicted and measured nuclear plant data through streamlined forms, validation-oriented workflows, and database-backed records. - Built modular Angular components to improve responsiveness, maintainability, front-end scalability, code reuse, and overall user experience for engineering data workflows. - Translated technical user needs into cleaner application flows for data capture and review, strengthening usability while keeping the implementation maintainable for future extension.	

CERTIFICATIONS

AWS Certified Solutions Architect - Associate	<i>Amazon Web Services (AWS)</i>	Apr 2026
AWS Certified Cloud Practitioner	<i>Amazon Web Services (AWS)</i>	May 2025
CompTIA Security+	<i>CompTIA</i>	Jun 2025

EDUCATION

Bachelor of Science, Computer Science	<i>Penn State University, State College, PA</i>	May 2023
Minor, Cybersecurity Computational Foundations	<i>Penn State University, State College, PA</i>	May 2023

SKILLS

Cloud / AWS: AWS, Lambda, API Gateway, ECS/EKS, RDS/Aurora, DynamoDB, S3, SQS/SNS, CloudWatch, CloudTrail, EventBridge, Secrets Manager, IAM, VPC, security groups
Backend / Data / AI: Python, REST/API gateway patterns, MySQL, PostgreSQL, pandas, scikit-learn, PyTorch, AI-assisted development workflows
DevOps / Security: Terraform, Ansible, Git, GitLab CI/CD, Docker, Kubernetes, ELK, Linux, Windows
Quality / Operations: infrastructure validation, regression checks, failure reporting, observability, troubleshooting, Git-based code reviews
Exposure: Flask, Amazon Bedrock, SageMaker, MLOps, model deployment pipelines, agent integrations, CloudFormation, Kinesis/Kafka/MSK

TECHNICAL PROJECTS

- Built websites and applications with Codex/OpenAI API and Claude Code/Anthropic API, using agentic workflows to map large repositories, implement scoped changes, refactor code, debug failures, and prepare reviewable code changes.
- Built n8n workflows integrating OpenAI API and Anthropic API for hands-on AI automation, reusable prompt-driven steps, credential-aware configuration, and validation checks for prototype agent integrations.
- Applied Python data and ML tooling (pandas, scikit-learn, PyTorch) in technical projects, strengthening fluency with data workflows relevant to AI-enabled backend automation.
- Used AI-assisted workflows to decompose requirements, inspect repositories, validate generated changes, and keep implementations scoped, readable, and maintainable.
